Current problems and emerging issues in occupational and environmental health have significantly shaped occupational medicine, occupational hygiene, and occupational safety. This paper explores the changing nature of occupational health and the economic, political, and cultural interdependence of countries over the past two decades. The impact of globalisation on occupational health is examined, focusing on the need for a wholistic approach to environmental health, which includes the effects of social, economic, and political forces on the health of patients. The role of the World Health Organization in defining occupational health is discussed, with a focus on how occupational health issues are addressed at the national level.

The economic and social significance of environmental protection and health is highlighted, with a special emphasis on the health hazards created by chemicals, dust, metals, and other contaminants. The role of preventive health care in reducing occupational environmental hazards is also considered. The economic aspects of occupational safety and health are examined, with a focus on the benefits of a healthy workforce for sustainable social and economic development. The paper discusses the effects of social, economic, and labor policies on occupational health, and the role of health promotion in addressing occupational health issues.

The paper also considers the economic and social burden of occupational diseases and the importance of effective solutions for occupational health. The impact of globalisation on occupational health and the need for a wholistic approach to health practice towards new types of issues are also discussed. The authors conclude that a wholistic approach to environmental health, which includes the effects of social, economic, and political forces on the health of patients, is essential for sustainable social and economic development.
